11. OUTPUT

ABSTRACT :

In December 2019, a pneumonia outbreak was reported in Wuhan, China. On 31 December 2019, the outbreak was traced to a novel strain of coronavirus. Coronaviruses are a group of related RNA viruses that cause diseases in mammals and birds. In humans and birds, they cause respiratory tract infections that can range from mild to Lethal. Coronaviruses can cause colds with major symptoms, such as fever, and a sore throat from swollen adenoids.

OBJECTIVE :

Our project marks a step towards spreading awareness about coronavirus and encouraging vaccination, along with maintaining proper information such as number of patients who tested covid positive, number of beds available and other such related details.

METHODOLOGY :

We proposed a Pandemic Management System taking Coronavirus pandemic as an example to show various features of our project. It is capable of managing each and every data regarding CoronaPatients, Doctors, Hospitals, Home Quarantined People, etc. It helps Government and other concerned authorities in making effective policies because of proper flow of information from ground reality to higher levels. The data management of information of corona patients, doctors, hospitals, home quarantined people, etc is done by using sql by using commands like create table and insert values into table_name to collect and store and arrange

data and the front end work of designing and presenting data in form of website is done by various programming language like html, css etc.

EXPECTED OUTCOME :

In this Pandemic Management System Project we generate statistical reports on timely basis using Sql queries, calculation of initial trends as patient symptoms etc. We have covered every data regarding Corona patients, Doctors, Hospitals, Home Quarantined People, Appointment section, etc.

The point of the project will be to give individuals the details identified with COVID-19 and educate them with the data from the specialists and other authority assets so they can forestall themselves structure the pandemic circumstance.

FUNCTIONAL REQUIREMENT:

1. Users can see all the information related to covid 19 such as no. of hospital beds, oxygen cylinder etc. available, no. of people quarantined, recovered, died etc. and can access the seriousness of the situation.
2. Users can book slots for getting their dose of vaccination.
3. Users can also make use of covid tracker feature of the project to get the graphical representation of covid 19 situation in a country.
4. State authorities can add, delete and make changes in the information to provide updated and reliable data.

5. Pandemic management project is the best way to get information related to covid 19 and also to book slot for vaccine.

TABLES AND CONSTRAINTS

We have total 7 tables.

```
mysql> show tables;
+-----+
| Tables_in_project |

```

WORKING:

1. Fetching the data from front end and storing it in database.

Login table:

```
mysql> SELECT * FROM USER_LOGIN;
```

Name	State	AadharNo
Ravi	Goa	35706547
RAM	DELHI	35707896
ALI	HIMACHAL PRADESH	76547896
ROHAN	GUJARAT	76574896

Inserting data in form:

Pandemic Management System

Register Here

Name:

State:

Aadhar Number:

Make sure to type the valid Aadhar Number

Click on submit and data registered successfully.

Data is inserted in the login table:

```
mysql> SELECT * FROM USER_LOGIN;
```

Name	State	AadharNo
Ravi	Goa	35706547
RAM	DELHI	35707896
ALI	HIMACHAL PRADESH	76547896
ROHAN	GUJARAT	76574896
SEEMA	ANDHRA PRADESH	87607896

Same working is for vaccine booking form.

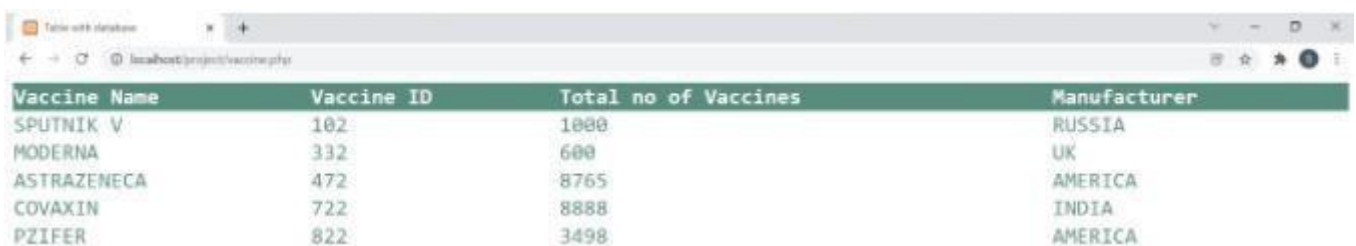

2. Display and Modify data of database and show in the front end

Displaying data stored in database on the front end:

```
mysql> select * from vaccine;
```

VName	VID	VTotal	Manufacturer
SPUTNIK V	102	1000	RUSSIA
MODERNA	332	600	UK
ASTRAZENECA	472	8765	AMERICA
COVAXIN	722	8888	INDIA
PZIFER	822	3498	AMERICA

Data from database is shown on the front end:

The screenshot shows a web browser window with the URL `localhost/project/vaccine.php`. The page displays a table with vaccine information. The table has four columns: Vaccine Name, Vaccine ID, Total no of Vaccines, and Manufacturer. The data is as follows:

Vaccine Name	Vaccine ID	Total no of Vaccines	Manufacturer
SPUTNIK V	102	1000	RUSSIA
MODERNA	332	600	UK
ASTRAZENECA	472	8765	AMERICA
COVAXIN	722	8888	INDIA
PZIFER	822	3498	AMERICA

Modifying data stored in database and showing the changes on front end:

```
mysql> insert into Vaccine(VName, V_ID,VTotal,Manufacturer)
-> values
-> ('COVIDSHIELD',900,3000,'INDIA');
```

Vaccine Name	Vaccine ID	Total no of Vaccines	Manufacturer
SPUTNIK V	102	1000	RUSSIA
MODERNA	332	600	UK
ASTRAZENECA	472	8765	AMERICA
COVAXIN	722	8888	INDIA
PZIFER	822	3498	AMERICA
COVIDSHIELD	900	3000	INDIA

Data is modified and displayed on the front end.

Same working is for covid information and covid healthcare category.

3. Data from the slot form is saved in database.

Inserting data into form:

localhost says

Recorded Added Successfully

OK

BOOKING FORM

Name:

Aadhar Number:

Booking ID:

Hospital:

Hospital ID:

Vaccine:

Vaccine ID:

Year(yyyy) Date

Click on submit and data is added successfully.

Data is inserted into booking able:

```
mysql> select * from booking;
```

Name	AadharNo	B_ID	HName	H_ID	VName	V_ID	Date
Rishika	10000000	100	MEDICOVER HOSPITALS	800930	COVAXIN	722	2021-12-07
